Exercise: Creating an external style sheet

1. Open the *styles* folder.
2. In this folder, create a new file called *styles.css*.
3. Open the file in your editor.
4. Switch to the *update.html* file in your editor.
5. Cut the rules only (the content *in* the `<style>` container, NOT the `<style>` tags themselves).
6. Switch to the *style.css* file in your editor.
7. Paste the rules.
8. Save both files.
